Clean Fuel

Natural gas vehicles (NGVs) can have a direct, positive impact on America’s air quality and environment – today. NGVs in urban environments are a solution for meeting the Environmental Protection Agency (EPA) non-attainment measures and improving local air quality.

NGVs improve air quality through dramatic reductions in emissions, such as:

- Reducing carbon dioxide (CO₂) emissions by 20% to 30%
- Reducing carbon monoxide (CO) emissions up to 75%
- Reducing nitrogen oxide (NOx) emissions by approximately 50%
- Reducing up to 95% of particle matter (PM) emissions
- Reducing volatile organic compound (VOCs) emissions by 55%
